The Irish Specimen Fish Committee

Founded in 1955, the ISFC is an independent voluntary body, representative of angling interests in Ireland, whose principal function is to verify, record and publicise the capture of large (i.e. specimen) fish caught on rod and line by anglers in Ireland, both in freshwater and marine waters. The Committee also ratifies Irish record rod caught fish. The ISFC coordinates and administers the unique specimen awards scheme which is designed to recognise any angler who catches a specimen fish and to publicise the angling venue. Successful anglers are awarded a certificate and a commemorative badge. Specially commissioned silver medals are presented to captors of record fish and special awards are also made to captors of multiple specimen fish (on a cumulative basis). This report is a detailed listing of all particulars relating to specimen and record fish captures in Irish waters in 2022. Over 32,000 claims have been received by the ISFC over the past 67 years. This dataset is one of the longest time-series of its type.

Irish Specimen Fish Committee Members 2022

Dr. Robert Rosell (*AFBI*), Chairman, Dr. William Roche, Secretary, Shane O'Reilly, Treasurer, Myles Kelly and Micheál Hennessy (*Inland Fisheries Ireland*), Alan McGurdy, Glenda Powell, Stewart McGrane (*Game Angling*), Dr. Edward Fahy, Der Casey (*Coarse Angling*) and Brian Cooke (*Sea Angling*).

Awards Presentation

*Anglers due awards for 2022
are invited to attend the*

*Presentation of Specimen Awards at the
Clayton Hotel Leopardstown, Dublin
at 2.00 pm on 11th March 2023*

ISFC Chairman's Report 2022

ISFC has completed its 2022 meetings, including the review of the year's claims, a marathon session, completed with a near full Committee assembled in person. Specimen fish claims submitted this year ranged from Gudgeon at 14 cm, to one of our largest species, porbeagle shark. It was a pleasure to get back to the detail and subtlety of discussion that online meetings just do not do as well. Thanks to all claimants for the generally very high standard of evidence presented.

There was meticulous discussion around possible new records which are currently exclusively weight-based. Candidate weight-based records were considered for Gilthead Bream and Gudgeon. For smaller species (< 1 kg) the Committee has decided that weight-based claims will have to be presented in grammes to allow for clearer discrimination of size. Submissions for new smaller species potentially approaching length-based record awards included Corkwing wrasse and Shore rockling. At the other end of the size range, some very large Porbeagle sharks were reported, which cannot be weighed at sea, but which otherwise could tantalisingly have included a record.

The humble Gudgeon and huge Porbeagle shark between them re-triggered difficult discussions around the potential of incorporating length-based records, and how this might be achieved, while respecting the old weight-based records. Working within current rules, the 2022 new record Gudgeon will be expressed as a weight. This is despite being a "new" species recently added to the specimen listing. From 2023 onwards the few new species without an existing weight-based record will be eligible for granting record status based purely on length.

Length is internationally the most common means of recording the largest fish, from snout to fork of tail for freshwater species and total length for marine fish. There is much sense to this - most fish species while growing in length through a lifespan, will gain and lose weight with seasonal changes in condition and through spawning. Length-based specimen reporting options continue to be rolled out for new species based on data available. Nevertheless, the committee clearly has considerable work to do setting criteria of due merit for awarding a new length based record status before considering any set of alternative length-based records.

Length measurements are easier to report, but just as for weights, must be made with appropriate consistency and proper equipment. We noted, with interest, valiant efforts to measure sharks in the water against a measuring mat alongside a smallish boat, for fish and angler welfare reasons, and while these fish clearly exceeded specimen length, difficulties in photographically capturing an accurate length made it difficult for ISFC to report an exact length. At the other end of the size scale, the inclusion of length-based recording for smaller species, has re-iterated the need for clear measuring mats or boards with head stop and the whole fish photographed and showing clearly appropriate measuring scale intervals.

Other ongoing projects for ISFC include finalising the Specimen Fish Atlas and working with an app developer towards a smartphone based specimen reporting system in addition to existing options of emailed or posted form and photos.

We also continue reviewing individual species specimen thresholds, to maintain and control claims flow, avoid domination of the list by one species, or optimise the balance between length and weight-based data. Over 20% of claims in 2022 were for spurdog, but for once we opted not to increase the specimen threshold, in light of the EU and UK lifting of the ban on commercial fishing for spurdog, following the ICES note of stock recovery, and anticipating a potential impact of any resumed fishery.

As Chair, and on behalf of Committee and all who benefit from the work of ISFC, I thank Inland Fisheries Ireland, DAERA, Anglers and other sponsors who fund or otherwise assist ISFC, provide the venues for committee meetings or allow their staff to participate. In return we offer the report as an advert for the best of the angling experience that Ireland and Northern Ireland can offer. I wish the best of luck (as well as outworking of knowledge and skill!) to all big fish chasers in 2023.

A handwritten signature in black ink, reading "R. Rosell".

Dr Robert Rosell, Chairman ISFC

March, 2023

Report of the Irish Specimen Fish Committee 2022

In 2022 the ISFC processed 461 claims. A total of 10 were rejected for non-compliance with ISFC rules and another 15 will be queried further. This report presents details of special awards and ratified specimen fish for 2022.

New Irish Records

For fish exceeding the current Irish record weight

Gudgeon 51.02 g, Portna Canal, 26 Feb 2022, Terry Jackson, Co. Down

Gilthead Bream of 3.768 kg, Rosscarbery, 22 Aug 2022, Robert Quin, Cork

Minister's Award winner David Brennan with his 3.729 kg Gilthead Bream

DR MICHAEL KENNEDY AWARD MULLET OF THE YEAR

Dr Michael Kennedy, a pioneering fisheries biologist and one of the founders of the ISFC, had a lifelong research interest in mullet species. The Kennedy Award is for the best specimen (highest percentage of the record) and/or a new record of any of the three mullet species for that year.

Ian Mulligan, Dublin

1.25 kg **Golden Grey Mullet** at Rosscarbery, Co. Cork, 25 Sept. 2022

DR AEJ WENT AWARD YOUNG SPECIMEN ANGLER OF THE YEAR

Dr Arthur Went, a noted fisheries biologist and one of the two founder members of the ISFC, nominated this award which is for the best specimen of the year (based on the highest percentage of the specimen weight or length) taken by an angler aged 13 years or younger.

David Tully, Dublin

4.8 kg **Bream** from Tully Loran Lake, Co. Cavan, 22 June 2021

THE MINISTER'S AWARD

Inaugurated by the Minister for Environment, Climate and Communications, this "fish of a lifetime" award is for the best specimen fish of the year (other than a new record), and is presented to the angler who catches a fish which represents the highest percentage of the existing record.

David Brennan, Dublin

3.729 kg **Gilthead Bream**, Clonakilty Bay, Co. Cork, 10 July 2022

BEST LENGTH SPECIMEN AWARD

Length specimens are commonly recorded by anglers since originally introduced by ISFC in 2011 and this award is for the longest length-based specimen in 2022 (% of the threshold length).

David Craig, Ballyclare

235 cm **Common Skate**, Islandmagee, Co. Antrim, 26 March 2022

BEST INTERNATIONAL FISH AWARD

This award is for the best specimen fish, (calculated as the highest percentage of the current record weight), taken by an overseas angler.

Martyn Rayner, Scotland

0.798 kg **Three Bearded Rockling**, Kilmore Quay, Co. Wexford, 14 September 2022

SPECIMEN FISH CLAIMS RATIFIED BY THE COMMITTEE IN 2022

FRESHWATER FISH 2022

Coarse Fish & Pike 2022

BREAM

Record 6.07 kg; Specimen Weight, 3.402 kg (7.5 lbs)

Heaviest Bream of 2022 was taken by David Flynn

3.57 kg Bream for Anthony Kelly

Year of capture is 2022 unless otherwise stated. **Length** (L) is forklength (FL) (cm) for freshwater species, blue and porbeagle shark. Total Length (TL) for all other marine species. **S** = Shore & **B** = Boat. **Country of residence** of international angler denoted by relevant letter after surname. **(J)** after surname denotes juvenile angler.

Cuckoo Wrasse by Mark Todd

Special Notices

CLOSING DATE FOR SPECIMEN CLAIMS

Fully completed claims must be submitted by **31st October** each year. A charge of €10 applies for each claim (only Cyprinids) submitted for genetic analysis.

Shad scales: ongoing research into shad speciation indicates substantial inter-species complexity. For this reason genetic analysis of shad scales will not be undertaken for positive identification from 2022 onwards. Anglers are required to collect a scale sample which will be used for further research

NEW SPECIES, SPECIMEN WEIGHT & LENGTH REVISIONS

Rules/species listed below were reviewed in 2022— details of changes for 2023 in table below. FL refers to Fork Length; TL refers to Total Length.

Rule/Species	Old rule	New rule (2023)	2023 Status
RECORD FISH	Records will be weight based only	Records will be weight based, but, newly listed species, or species without a record weight, can be length based.	Record claims for new species, or species without a weight record, can be length based from 2023 onwards.
ALL SPECIES \leq 1 kg or \leq 40 cm TL or FL	Weigh and claim in imperial or metric units	Weigh and claim in grammes (g) and cm/mm	For smaller species claiming in grammes (g) and cm/mm will allow for more accurate reporting
Porbeagle (\geq 180 cm FL)	Photograph of full fish on measuring mat showing actual FL	Fish to be measured in water alongside vessel with 180 cm mark clearly visible on measuring device	All specimens will be awarded as $>$ 180 cm FL irrespective of actual length. Conservation and welfare-oriented rule.
Common skate	Named Common skate (<i>Raja batis</i>) in ISFC listings	Now Flapper skate (<i>Dipturus intermedius</i>)	Two separate species (Flapper & Blue Skate) identified in this species complex in 2009 (Iglésias et al., 2009)

Species	Current Threshold	Revised	2023 Status
Red Gurnard	\geq 0.907 kg	\geq 45 cm TL	added length specimen option
Mackerel	\geq 1.0 kg	\geq 44 cm TL	added length specimen option
Thick Lipped Mullet	\geq 2.268 kg	\geq 55 cm TL	added length specimen option
Three bearded Rockling	\geq 0.794 kg	\geq 40 cm TL	added length specimen option
Torsk	\geq 2.5 kg	\geq 2.0 kg \geq 40 cm TL	reduced weight and added length specimen option
Whiting	\geq 1.361 kg	\geq 54 cm TL	added length specimen option

GEOGRAPHICAL LIMIT FOR CLAIMS

The geographical limit for claiming marine specimen fish is defined as the marine waters bound by the Republic of Ireland and Northern Ireland sectors of the European Economic Zone (EEZ), and on the north east coast by the midpoint between NI and the remainder of the United Kingdom landmass.

WEIGHT BASED SPECIMENS

All fish must be weighed on scales which are verified for accuracy. **ALL elasmobranch (Dogfish, Sharks, Skates and Rays) claims (weight or length based), except Porbeagle require submission of a photograph showing the whole fish, measured on a measuring mat (with an end stop) or equivalent, with its length clearly discernible.** Photographs of whole fish on a measure is likely to be a requirement for all claims in the future.

Weighing instruments and certification: Retail outlet scales are checked regularly by officers of the Legal Metrology Service (National Standards Authority of Ireland) or their equivalent and are acceptable for weighing specimen and record fish. Club or personalised (i.e. scales not normally certified by the Weights and Measures Authority for trade purposes) can be certified for accuracy. Such scales, if certified by a reputable agency/company, are acceptable to the Committee. Certification will be valid for one year from the date of issue of the certificate of accuracy. The manufacturer's certificate of accuracy will not suffice. Weights from scales which are not certified at the time of weighing or certified in retrospect will not be accepted. Claims cannot be accepted in the case of fish which have been weighed on board a boat, **UNLESS WEIGHED ON A CERTIFIED MOTION-COMPENSATED BALANCE.**

Weighing scales and minimum weight: Scales must be appropriate to the size of fish being weighed. **The minimum weight permitted is 10 times the scale interval (or weighing division) to ensure that fish are weighed on appropriate scales.** This means that for scales with a 50g interval (or scale division) fish being weighed have to exceed 500g (1 lb 2 ozs) in weight. For a 2 oz interval a minimum weight of 20 ozs applies.

LENGTH-BASED SPECIMENS

Fish must be measured on a recognised measuring device with an end stop and suitable graduations.

Length-based claim procedure: Claims must be made on current form and angler **MUST** specify if length-based.

The following evidence must accompany each length-based specimen claim:

- (a) Photograph(s) showing fish placed belly down (elasmobranchs) or side down (all other species) on a properly extended measuring device with snout against perpendicular bar or plate with the actual recorded length (cm) visible. The snout tip will index the 0 cm measurement accurately. Dorsal caudal lobe to be depressed into line with its body axis and total length measured as a point to point distance (not over the curve of the body) from the snout tip to the tip of the dorsal caudal lobe.
- (b) Sex of the fish. Males can be identified by their claspers (modified pelvic fins) which are thin elongated paired fins situated behind the pelvic fins. Females do not have claspers but have an opening between the pelvic fins.

Suitable devices (measuring mats) are available from IFI, IGFA or tackle manufacturers.

Threshold values for all length based specimens (and wingspan measurements for ray and skate) are shown. Wingspan to be measured by placing fish on measuring mat. All freshwater species should be measured to forklength (FL). All marine species must be given as total length (TL) except Blue and Porbeagle Shark (both FL)

Angel Shark, Common Skate, Porbeagle Shark, Undulate Ray and White Skate have been re-listed as length-based specimens only. The primary reasons for their re-listing are to (a) collect data on their distribution and status which is scientifically valuable and (b) to provide additional species for anglers to target as specimens. In re-listing these species, which have an exceptionally high conservation value, the ISFC requires that anglers handle them with the utmost care and that best practise is adopted for lifting and returning to the water. Fish slings or similar are recommended. Detail on exact capture locations (Latitude/Longitude) would contribute further to refining species distribution information but will not be published by ISFC.

2.98 kg Thick Lipped Mullet for Ian Mulligan

NEW RECORD CLAIMS

New records for established species will continue to be weight based; however, for newly listed species, or species without a record weight, the committee will accept length-based record claims.

Photographic evidence for new records: A series of clear photographs must accompany all **record** fish claims, except in the few cases where a body (or presentation of the fish) is required for species identification. Photographs must show the whole fish lying on a flat surface and include a measure of scale (measurement mat, ruler). Preferably it should be photographed on a measuring mat or similar. Supplementary photographs showing the fish being weighed and the recorded weight would assist in further claim substantiation.

FISH SPECIES IDENTIFICATION

Genetic fingerprinting of certain cyprinids: To support claims for Roach, Rudd and their hybrids, anglers must submit 3 scales from a fish in a dry envelope (not in a plastic bag or tin foil) and good quality colour photographs. The entire fish on its side with, the dorsal and anal fins fully splayed, and close up photographs of the head (side on) are required for each fish claimed (full detail in table on the next page).

As genetic analysis of scales requires considerable time to process samples, anglers are requested to submit scale samples before 15th October.

Sample requirements for genetic analysis of selected cyprinids for species/hybrid determination			
Species	Sample required	Storage	Additional information
Roach, Rudd and their hybrids	3 scales	In an envelope with fish details and date	Good quality photographs required
Notes: As all fish can be returned alive please handle carefully. Allow envelope to dry out to preserve the sample. <u>Do not</u> store scales or tissue in plastic as sample will degrade.			

Marc Doyle's Blue Whiting caught when fishing out of Baltimore in 2021

Guidance for anglers taking photographs for fish identification purposes:

Photographs are acceptable for claim verification **if they provide conclusive evidence of the identification of a fish species** (Rule 4). A list of some external identification features for particular species identification are presented below.

Photographs, which should be taken as soon as possible after the fish is captured, must be in focus, clear and in colour, printed on good quality paper and show the relevant identification features. Photographs should include the name of the angler and date of capture. Close up photographs are required for many features and these photographs should fill the entire frame.

Digital images submitted by DVD, CD or email must be tagged with angler name, fish species, weight, length and date of capture.

Species	Features to photograph (a) the whole body (lateral view) must be photographed for all species AND (b) the specific features detailed below
All cyprinids (Dace, Roach, Roach/Bream, Roach/Rudd, Rudd, Rudd/Bream)	Whole body; body with fins extended and close ups of: (a) mouth - closed (b) dorsal fin (c) full lateral line (d) anal fin Three scales to be taken
Angler Fish	Whole body; head area showing head appendages upright
Brill	Whole body; close up of skin
Cuckoo Wrasse	Whole body; lateral view, close up of head
Dab	Whole body; close up of skin and lateral line
Flounder	Whole body; close up of lateral line scales close to head
Golden Grey Mullet Thin-Lipped Mullet	Whole body and close ups of: (a) head including pectoral fin (lying flat) (b) mouth showing upper lip (c) underside of head
Grey Gurnard	Whole body; close up of lateral line and head
Thick Lipped Mullet	Whole body; close up of head showing upper lip (head-on), underside of head to back of gills
Herring	Whole body; keel of fish
Lesser Spotted Dogfish	Whole body; underside of head
Mackerel	Whole body; close up of stripes on back
Megrim	Whole body; head

Species	Features to photograph
	(a) the whole body (lateral view) must be photographed for all species AND (b) the specific features detailed below
Ray's Bream	Whole body; close up of head
All Gurnards	Whole body; detail of lateral line, head with pectoral fin fully expanded
Red Mullet	Whole body; close up of head
Scad	Whole body; close up of entire lateral line
Shad - Allis, Twaite & Hybrid	Whole body; three scales to be taken
Smooth-hound	Whole body and close ups of: (a) tail fin (b) underside of head showing mouth (c) back in region of dorsal fin
Three Bearded Rockling	Whole body; close up of head and lower jaw area, and close up of area in front of dorsal fin
Torsk	Whole body; close up of skin and dorsal and tail fin area

Additional details of important features are detailed in IFI's Fish Identification Guide
<http://www.fisheriesireland.ie/Angling/angling-publications.html>

Examples of close-up images required for cyprinid identification. Photograph of fish on measuring mat (or similar) which show general shape, position of fins and other features also required.

OTHER REQUIREMENTS

Place of capture: For freshwater species all claims must include the name of the water in which the fish was caught (e.g. Monalty Lake) and in the case of the larger systems, the area (e.g. River Shannon – Rooskey). For marine species taken by boat angling the port of origin and the place of capture (examples: Burford Bank, 5 km West of Stags Head or Smiths) should be stated.

Metrification: Claims will be accepted under the metric and imperial systems unless legislation dictates otherwise. Importantly, from 2023 onwards, ALL SPECIES ≤ 1 kg or ≤ 40 cm TL or FL, should be weighed and claimed in grammes (g) and cm. **Since** 2006, fish weights have been presented in kilogrammes in the Annual Report. Many anglers continue to use imperial measurements for fish and in 2010 ISFC decided to report in both metric (SI) and imperial metric systems.

Length measurements on claim form: A length measurement provides informative data about the species being claimed and additional verification information, and is requested for all species. Considerable length variation is evident for many species due to natural variability (time of year, sex, location, feeding etc) but it is likely that fish length measurement techniques are inconsistent also. Measurement mats are recommended to provide standardized measurements of specimen fish.

Closed seasons: Closed seasons apply to several species (e.g. brown trout, salmon, etc). Any fish taken in the closed season will not be ratified.

Maximum number of claims per species: A maximum of three (3) awards will be made to any particular claimant for any single species in any one year. If an angler achieves this target and subsequently captures a larger fish within the year, this fish can be claimed but the final number of awards for any species in a single year will not be more than three.

Exclusion from specimen status (stocked fish): Where species of fish are introduced to a fishery at or above the specimen weight, those species from that particular fishery will not be considered for specimen or record status. Escapees from fish farms in either freshwater or marine are also excluded.

ADMINISTRATION

Captors Addresses: Because of difficulties in establishing eligibility for the 20 Species, 10 Species, 50 Specimen and 10 Specimen Awards, anglers are requested to inform the Committee of any changes in their address.

ESTABLISHING A NEW SPECIMEN FISH CATEGORY

An important function of the ISFC is to act as a focal point for data collection on the occurrence of notable, rare or unusual species taken on rod and line in Irish waters. In some instances this has led to species previously regarded as “unusual” being added to the list of eligible species. Examples from recent years include smooth-hound (*Mustelus asterias*) and three bearded rockling (*Gaidropsarus vulgaris*), (from 1983), garfish (*Belone svetovidovi*) (from 1986), torsk (*Brosme brosme*) (from 1988), trigger fish (*Balistes carolinensis*) (from 1992), bluemouth (*Helicolenus dactylopterus*) (from 2002), albacore tuna (*Thunnus alalunga*) (from 2002), golden grey mullet (*Liza aurata* (Risso)) (from 2005), gilthead bream (*Sparus aurata* L.) (from 2007), blackmouthed dogfish (*Galeus melastomus*) (from 2008), black bream (*Spondyliosoma cantharus*) (from 2009), and thin lipped mullet (*Liza ramada*) from 2011.

To begin the process of attempting to establish a new specimen fish category, anglers **are requested to submit a completed claim form** for each fish captured. This is to establish a database for the species and enable further investigation and comparison of future claims. Claims for 10 fish of that species must be submitted for it to be considered for possible inclusion on the listings. The specimen weight will be set from this dataset and other relevant data. The record fish will be ratified after 5 fish exceeding specimen weight are ratified.

With some species a body may have to be forwarded for positive identification. Other arrangements would apply for larger fish. The availability of a body will allow the Committee to verify positive identification of the species and the claims will allow monitoring of numbers and weights of the species. This facilitates assessment of the likelihood of capture, the likely specimen weight and the availability and seasonality of the species. It is difficult to legislate for every situation that may arise but the final decision will rest with the Committee and will be based on a balanced review of the information available. While this process is progressing some details of interesting fish captured will be reported in the annual report.

PRESENTATION OF 2021 AWARDS

The ISFC Awards Day Presentation was held on 5th November 2022 in a Dublin hotel.

ACKNOWLEDGEMENTS

Special acknowledgements: Inland Fisheries Ireland (IFI) continues to support and provide other services to the ISFC and is sincerely acknowledged. Sincere thanks to Myles Kelly and Shane O'Reilly, IFI, who manage the ISFC website, and ISFC auditor Michael Martin (IFI). ISFC Chairman, Dr Robert Rosell and Dr Steven Beggs (both AFBI) provide a specimen fish identification service for anglers in the northern part of Ireland and are thanked for their efforts. Bridie Fleming's (formerly IFI) support of ISFC activity is very much appreciated. Thanks to Eoin Leonard (IFI) for his time also.

Charter skippers, club members, guesthouse owners, tackle dealers and IFI staff who follow up claims and ensure that the necessary paperwork is attended to are gratefully acknowledged.

Special thanks are due to Rory Hanrahan, National Metrology Laboratory NSAI for his input in 2022 and previously. DNA analysis, undertaken by Dr. Jens Carlsson and Dr. Nettan Carlsson at UCD, has significantly advanced ISFC fish identification procedures for some species.

Photographs: Many photographs in this report are taken by anglers. They, along with charter skippers, fisheries staff and journalists, are acknowledged for these.

Shore Rockling is a new species on ISFC listings from 2021 onwards

3 Bearded Rockling

M. Martin (Accountant)

DONATIONS

The ISFC is a voluntary body and all of its activities are funded by grants/donations from diverse sources. All funders are gratefully acknowledged.

Benefactors in 2022 were:

Inland Fisheries Ireland, Dept of Agriculture, Environment and Rural Affairs (DAERA); Delphi Fishery; **Peter Bolger**, Dublin 17; **John Boyle**, Tralee, Co. Kerry; **Noel Darcy**, Thomastown, Co. Kilkenny; **Donal Doney**, Cork City; **Eric Gosnell**, Blackrock, Cork; **Christy Lane**, Dillons Cross, Cork; **Noel Lane**, Mayfield, Cork; **Nicky McEvoy**, Waterford City; **Bert McGregor**, St. Margarets, Co. Dublin; **John Millerick**, Kinsealy, Co. Dublin; **Joe Mulholland**, Dundalk, Co. Louth; **Karl O'Leary**, Limerick; **Jim Walsh**, Glencullen, Co. Dublin.

[†] N.B. Where species identification states body required, high quality photographs showing relevant identification features (see Rule 4) may suffice.

IRISH SPECIMEN FISH COMMITTEE RULES

PLEASE READ CAREFULLY

- (1) **IRISH SPECIMEN FISH COMMITTEE:** This Committee consists of representatives of the Irish Angling Federations and the Government Departments and official organisations interested in angling. Its objective is to verify, record and publicise the capture of large fish on rod and line in Irish waters. A list of Specimen Fish is published annually by the Committee. Only fish which can be fully vouched for as to weight and species can be accepted and listed by the Committee. Length-based specimens can be claimed for certain species (check listing). Except in exceptional circumstances, claims will remain valid for a period of one year following the year of capture.
- (2) **FAIR ANGLING:** "Fair Angling" means any legitimate method of angling with rod and reel which is recognised as a fair and sporting method. A fish must be hooked in or in the immediate vicinity of the mouth when it has taken the bait or lure; fish which have been foul-hooked, even accidentally, are not eligible. A fish in respect of which a claim is made must be hooked, played and landed by the angler **UNAIDED**, though the fish may be gaffed or netted by another, and it is permissible for the person using the gaff to take hold of the trace or doubled line (in the case of big game fishing) to steady the fish when it has been played out and brought within reach. If a fixed rod holder is in use while boat fishing, and a fish strikes, the rod must be removed from the holder as quickly as possible. This is to ensure that the angler hooks and plays the fish with rod in hand. Where a fighting chair is employed, it must not have any mechanically driven device which aids the angler in playing a fish. Body harnesses (which attach the rod to the body) are permissible but must not be fixed to the chair. Gimbals must be free swinging including those which move in the vertical plane. Gimbals which permit the angler to rest or reduce strain while playing a fish are prohibited. Breakage of rod, reel or line, or alteration or substitution of tackle, while a fish is being played, disqualify it for claim or record purposes. A fish may not be shot, lanced, clubbed or harpooned before landing. Claims for fish caught during the statutory close season for the species (where this applies) cannot be accepted.
- (3) **WEIGHING:** Fish must be weighed in the presence of independent, reliable witnesses on a properly certified scales, e.g., a shop scales or an official club scales which is covered by a calibration certificate from an appropriate service provider (e.g. NML). A weighing scales must be appropriate to the size of fish being weighed. **The minimum weight will be 10 times the scale interval (or weighing division).** Where weights are in large divisions (e.g. 1 lb/1 kg divisions) the weight of a fish must be rounded **DOWN** to the nearest actual division.

Claims cannot be accepted in the case of fish which have been weighed on board a boat, UNLESS WEIGHED ON A CERTIFIED MOTION-COMPENSATED BALANCE.

Please note: All club and personal scales MUST be certified annually by an independent agency. Weighing scales must be covered by a Certificate of Accuracy at the time of weighing. They cannot be certified in retrospect, i.e. after the fish has been weighed.

For a length based specimen a photograph of the fish on a measuring mat or similar device must accompany the claim.

- (4) IDENTIFICATION:** The identification of a fish must be fully documented where there is a possibility of confusion with another (and particularly larger) species. For this reason scales from the fish, high quality photographs (incl. close ups) or the actual body must be forwarded as actual proof of identification.

FISH SCALES must be submitted in respect of claims for **SALMON, SEA TROUT, BROWN TROUT** (including **SLOB TROUT**), **RUDD, ROACH**, and their hybrids, **DACE** and **SHAD**. Any brown trout taken in tidal waters, i.e., in the sea or in an estuary below the freshwater boundary as defined for that river will be regarded for claim purposes as a slob trout. About 10 scales gently removed from one shoulder of the fish should be sent with each salmonid claim. 3 scales are required from Roach and Rudd and their hybrids for genetic identification. Genetic identification is subject to a charge of €10 per claim to cover the analysis, and payment can be made on the ISFC website.

CLEAR, SHARP, CLOSE-UP PHOTOGRAPHS, showing the entire fish with its fins and other features easily seen, and not foreshortened or obscured by shadows or bystanders must be provided in the case of **ALL CYPRINIDS, ALL ELASMOBRANCHS, BLUEMOUTH, ANGEL SHARK, POLLACK, BALLAN WRASSE, TRIGGERFISH, COALFISH, ALBACORE, TUB GURNARD** (pectoral fins of gurnard must be fully expanded) **GILTHEAD BREAM** (whole body and head shot showing mouth and eyes).

WHERE PHOTOGRAPHS ARE OF SUFFICIENT QUALITY TO PROVIDE CONCLUSIVE EVIDENCE (i.e. key identification features clearly visible) to identify the following species: **ANGLER FISH, BRILL, DAB, LESSER SPOTTED DOGFISH, FLOUNDER, GREY & RED GURNARDS, HERRING, MEGRIM, MACKEREL, GREY MULLET, GOLDEN GREY MULLET, THIN-LIPPED MULLET and RED MULLET, RAYS BREAM, THREE BEARDED ROCKLING, SCAD, TORSK, CUCKOO WRASSE and BLACK BREAM**, the body is not required. If the angler is in doubt about image quality the body can be presented. Body (head and gills only) required for **GARFISH**.

> 99.5% of specimens requiring supporting material for identification are identified by scales, genetics or photographic evidence.

RECORD FISH: Claim must be supported by a series of clear photographs showing relevant features for positive identification and a clear indication of fish length (i.e. whole fish on a measurement mat or similar). New records for established species will continue to be weight based; however, for newly listed species, or species without a record weight, the committee will accept length-based record claims.

(5) LIMITATION ON NUMBER OF CLAIMS: A maximum of three (3) awards will be made to any particular claimant for a single species in any one year. If an angler achieves this target and subsequently captures larger fish, these will be taken into account but the final number of awards for any species in a single year will not exceed three. By including this latter provision, it will ensure that the anglers competitive spirit is kept up and higher achievements could still be sought.

(6) SENDING FISH TO THE COMMITTEE:

Identification is mainly based on scale or photographic evidence but if a body is being forwarded please

(1) notify the Committee when a fish is being sent in for identification.

Telephone: 01-884 2600.

E-mail: isfc@fisheriesireland.ie

(2) do not forward fish to the Committee before Bank Holidays or weekends; (keep in a cold store or preferably frozen if fish cannot be delivered quickly on or before Friday afternoon).

(3) attach a label to each fish forwarded for identification giving the captor's name and address, date and place of capture and the weight of the fish.

(4) do not send fish in polythene bags or wrapped in aluminium foil as this causes rapid decomposition. Specimens should be wrapped in greaseproof paper and then in newspaper and brown paper.

(7) AWARDS: Anglers whose claims have been accepted by the Committee will be awarded special "Merit Badges" in the case of Specimen Fish and Silver Medals in the case of Record Fish. Specimen Fish Certificates will also be issued in respect of all ratified claims. Only one merit badge will be awarded to any angler per annum even where multiple claims are received. Specially commissioned awards are made to anglers for cumulative specimen fish captures of 20 species, 10 species, 50 specimens or 10 specimens. Other special awards are the Dr. Micheal Kennedy Award (Mullet of the year), the Dr. Arthur Went Award (Young Specimen Angler of the Year), the Minister's Award (Fish of a Lifetime), Best Length Specimen and the Best International Specimen Fish Award (for the best overseas angler specimen).

CLAIM FORM SUBMISSION – Completed claim forms should be sent to: The Irish Specimen Fish Committee, Inland Fisheries Ireland, 3044 Lake Drive, Citywest Business Campus, Dublin 24, Rep. of Ireland (Tel. 00-353-1-884 2600) before 31st October every year. Where required for identification purposes (see Rule 4) fish should be sent to the same address. Scales from shad and cyprinid hybrids for genetic analysis must be forwarded to ISFC before 15th October.

For marine fish taken in Northern Ireland contact Dr. Steven Beggs, AFBINI,
Newforge Lane, Belfast BT9 5PX, Ph: +44 (0) 28 9025 5503.
Email: steven.beggs@afbini.gov.uk

For freshwater fish taken in Northern Ireland contact Dr. Robert Rosell, AFBINI, Newforge Lane, Belfast BT9 5PX. Tel: +44 (0) 28 9025 5236,
Fax: +44 (0) 28 9025 5004.
Email: robert.rosell@afbini.gov.uk

IRISH SPECIMEN FISH COMMITTEE

Some important points for claiming specimen fish:

1. Use official ISFC claim form and complete **ALL** relevant sections fully.
2. **Tick box** to specify any length based claim.
3. **ALL** record fish, **ALL** length based claims and **ALL** skates, rays, sharks and dogfish **MUST** include a good quality photograph of the fish length (nose to tail) on a measuring mat or similar.
4. **Weighing:** Fish **MUST** be weighed (on land) on **CERTIFIED** scales or on a shop scales. Fish cannot be weighed on board a boat.
5. **Weighing scales must be certified annually** by a competent independent authority and the calibration certificate must be current at time of weighing.
6. **Check ISFC claim rules Section 4** for inclusions for some species (e.g. fish scales, additional photographs etc).
7. Claim form **MUST** be signed and witnessed.
